Midterm 1

Spring 2023

Student Name: \_\_\_\_\_

1. [30 points]. Select one correct answer for each of the following questions.

(1). The multiplication result of two complex numbers  $(3 + 4j) \times (3 - 4j)$  is equal to

- a. 6
- b. 25
- c.  $6 + 8j$

(2). For the cartesian coordinates shown in the diagram below, find the polar coordinate  $(r, \Theta)$  for the point p.

- a.  $(r, \Theta) = (\sqrt{2}, \frac{\pi}{4})$ .
- b.  $(r, \Theta) = (2, \frac{\pi}{6})$ .
- c.  $(r, \Theta) = (2, \frac{\pi}{4})$ .

(3). Find the energy of the following signal  $f(t) = t$  when  $t \geq 0$ , and  $t \leq 3$ , also  $f(t) = 0$  when  $t < 0$  or  $t > 3$ .

- a. 9
- b. 4.5
- c. 1.5

(4).  $u(t)$  is a continuous time unit step function.

For the discrete time signal  $f[k] = (0.5^k) u[k]$ , which statement below is correct?

- a. When  $k=2$   $f[k]=f[2] = 0.5 + 0.5 = 1$ .
- b. When  $k \rightarrow \infty$ ,  $f[k] \rightarrow \infty$ .
- c. When  $k \rightarrow \infty$ ,  $f[k] \rightarrow 0$ .

(5). Find the signal energy for the discrete time signal shown below.

- a. 5
- b. 8
- c. 14

(6). A system is said to be linear if \_\_\_\_\_

- a. It satisfies only the additivity property.
- b. It satisfies only the scaling property.
- c. It satisfies the superposition property.

(7). Is the system  $y[n] = 2x[n]$  linear?

- a. Yes
- b. No

(8). When are LTI (linear time invariant) systems stable?

- a. Only when a bounded input produces a bounded output
- b. Only when a bounded input produces an unbounded output
- c. Only when an unbounded input produces an unbounded output

(9). The discrete time cosine signal is always periodic.

- a. True
- b. False

(10) A time invariant signal must be linear.

- a. True
- b. False

2.[32 points].

(1). In the following figure, the continuous time signal is marked in blue and the discrete time samples are marked in red. Does this sampling cause aliasing?

Your Answer: \_\_\_\_\_

(2). What is the requirement of the sampling period  $T_s$  for a continuous time signal with a maximum frequency of 1000 Hz?

(3).  $f(t) = 20 \cos(5\pi t + 0.6\pi)$  is sampled with a sampling interval of  $T = 0.2$  second. Find the expression for the resulting discrete-time signal.

(4). The periodic discrete time signal  $\cos(0.4\pi k + 0.5)$  has a minimum period of  $N_0$  samples. You must show your calculation procedure on how to find the value of  $N_0$ .

3. [38 points] (1). The waveform of the signal  $y(t)$  is given below:

a. Draw the waveform of  $y(-t)$  below.

b. Draw the waveform of  $y(1-t)$  below.

c. Draw the waveform of  $y(t/2)$  below.

(2).

Suppose  $f(t)$  is the input signal, and  $h(t)$  is the system unit impulse response signal.

The continuous time domain convolution equation is defined below:

$$y(t) = f(t) * h(t) = \int_{-\infty}^{\infty} f(x) h(t-x) dx$$

where  $f(t) = (6t^3 - 2)u(t)$ ,  $h(t) = tu(t)$ ,

and  $u(t)$  is the continuous time unit step function.

**Please use the above integration formula to calculate the system response  $y(t)$  signal. You must show the detailed calculation procedure to get credit.**

(3). Find  $y_0(t)$ , the zero-input component of the response for an LTI system described by the following differential equation:  $(D^2 + 5D + 4) y(t) = D f(t)$ , when the initial conditions are  $y_0(0) = 0$ ,  $\dot{y}_0(0) = -3$ .

**You must show the detailed calculation procedure to get credit.**
